

GoSupply - Smart Real-Time Supply Chain Risk Management

Sustainability risk management

Supplier risk data management services in a new global environment

1. GoSupply & Sustainability - Background

Nowadays, the market has a **strong interest in assessing Sustainability-related risks**, not only within their organization, but also regarding their supply chains. For that reason, organizations are seeking to develop capabilities to receive real time alerts on sustainability using technology solutions and the internet channel, versus current existing methods built around the supplier channel, mainly via questionnaires.

Furthermore, the increasing **regulation environment around sustainability** has been exponentially increasing in the recent years, specially in 2021. One prominent example is the rapidly evolving legal framework on both European Union (EU) and local level **for global supply chains**. Some specific examples are the Supply Chain Act (Germany, 2023), Corporate Duty of Vigilance Law (France, 2017), UK Modern Slavery Act (UK, 2015), Child Labor Due Diligence Law (Netherlands, 2022) or Conflict Minerals Regulation (EU, 2021).

According to Forbes, more than 90% of CEOs say that **sustainability is fundamental for success**, which reflects the increasing investments that are being made in order to develop the companies towards sustainability.

GoSupply vision is to use all available channels of information to complement the supplier channel, but not to replace it entirely. Public sources (and predictive models) combined with tailored questionnaires to gather specific supplier- based ESG info provide a unique and differential value proposition for our clients.

1. GoSupply & Sustainability – Our vision

GoSupply's vision consists of using all available methodologies and channels in order to obtain high-quality information in real time, in order to offer our clients a unique value proposition regarding Supply Chain sustainability risk management.

SUPPLIER CHANNEL

GoSupply believes that a strong relationship with suppliers is key for obtaining relevant information for our clients, which cannot be acquired from other sources.

AUTOMATED SOURCES

3rd party information is key to get to the maximum amount of information possible without relying on the supplier availability. Furthermore, this channel reduces the burden for the supplier.

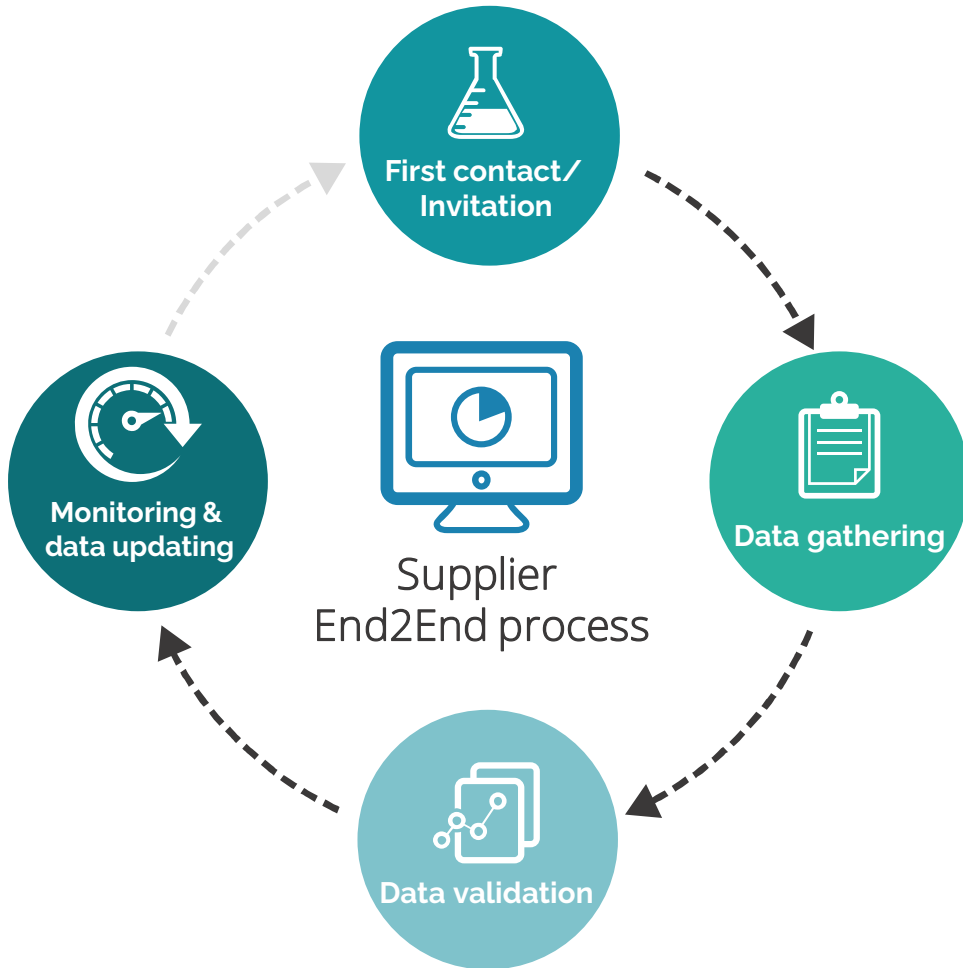

ESG AUDITS

With the aim of verifying the accuracy of the information gathered, periodical audits must be performed to specific suppliers, in accordance with the ESG principles.

SUSTAINABILITY

The combination of the 3 pillars of information gathered offers the possibility to perform a **full assessment of sustainability risk**.

Supplier End2End process

GoSupply manages clients' Suppliers from the outset, and covers the entire customer journey, ensuring the correct data gathering, validation and updating.

Invitation

GoSupply establishes a relationship with the supplier and registers them in the platform.

Data Gathering

Through refined questionnaires based on GoSupply's expertise, the sustainability information is gathered through the platform.

Data validation

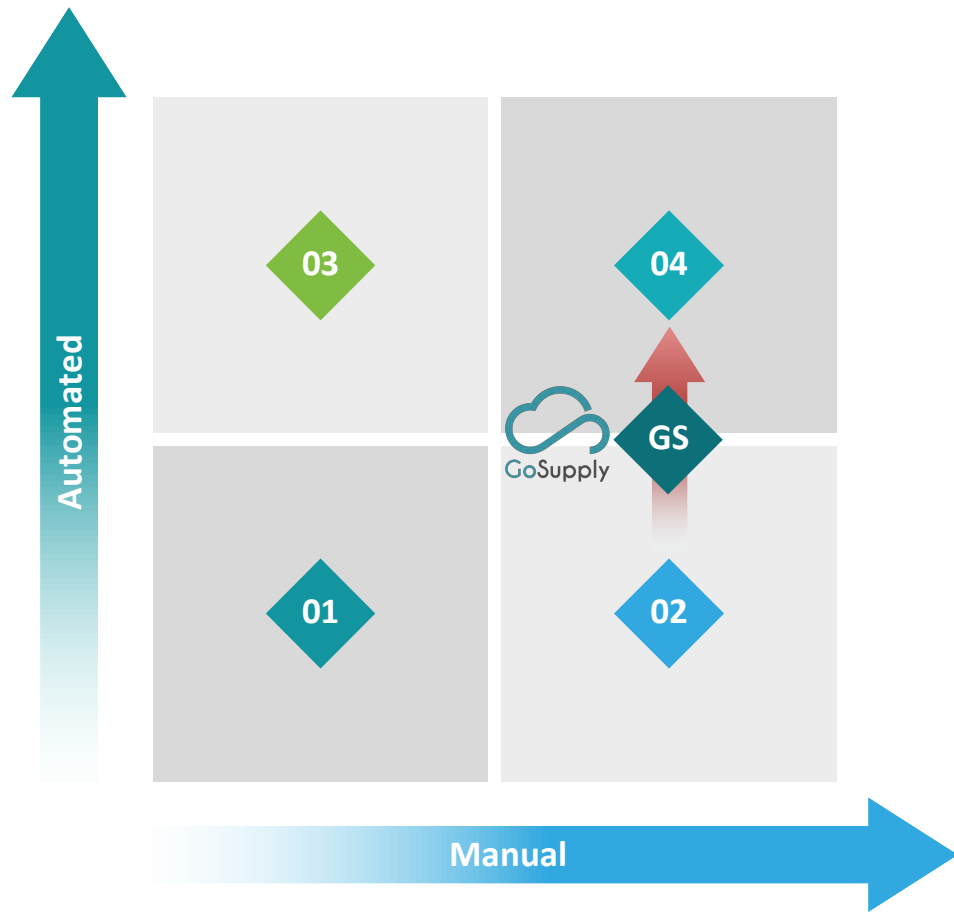

100% of the data is validated by our operations team before it is uploaded onto the platform.

Monitoring & Data Updates

Once the process is completed, GoSupply performs a monitoring of the data contained in the platform and helps the supplier to keep it up-to-date.

GoSupply's roadmap comprises the evolution towards automated information gathering, as a complement to the supplier channel, in order to achieve the excellence in sustainability risk management.

- 

03 Fully automated sources
No contact with supplier, all info generated from the internet
- 

04 360° Sustainability scope
Full coverage of the Sustainability scope, combining automated and supplier channels efficiently.
- 

01 Limited information
Legacy systems and methods, outdated
- 

02 Advanced Supplier channel
Advanced relationship with suppliers, requiring high effort and returning suboptimal output.
- 

GS GoSupply Status
GoSupply unique value proposition, combining the supplier channel with automated alerts & news-clipping processes

4. GoSupply & Sustainability – Business cases

GoSupply's platform helps its clients through its unique value proposition, as it can be seen in the successes achieved by our main clients.

- Advanced carbon footprint measurement
- Iberdrola promotes ESG criteria among its more than 22,000 suppliers worldwide, through GoSupply platform.
- Based on 47 factors, this system measures the degree of commitment to the three ESG principles.
- 2-year objective

- Cosentino was the first company certified in the ISO 20400:2017 standard, both in its sector and worldwide on sustainable procurement
- Key role from GoSupply in the process
- SDG oriented strategical supply chain dashboard

- Obtained the ISO 20400 sustainable procurement certification
- GoSupply played a key role in the process

European Top Tier Utility

- Initial stage with GoSupply
- The Project is Sustainability-Centered.
- Partnership with GoSupply in order to develop AI solutions to predict sustainability performance and trigger real time risk alerts
